SOURCE

25X1A [] the Firma Zeiss-Ikon in Dresden was constructing an optical marking device for ship's [] plates which was scheduled to be completed in 1953. The method of operation of the device involved the covering of plates with a bright layer sensitive to light upon which the design, amplified up to 6 x 6 meters, was projected by a projector. The firmfabrik Agfa of SAG Fotoplenka in Wolfen, which was scheduled to be employed in producing a suitable ground coat sensitive to light, refused, allegedly because of lack of skilled labor. The construction work was executed by Zeiss-Ikon at the Mathias Thesen Werft in Wismar.
